

Apprentice Case Study

MATTHEW YATES

LEVEL 3 MECHATRONICS APPRENTICESHIP
EMPLOYED BY AFS LIMITED

“MY APPRENTICESHIP HAS HELPED ME FOLLOW IN THE FOOTSTEPS OF MY DAD! 🎧”

I have always wanted to undertake an Apprenticeship, because my Dad is an Engineer and I wanted to follow in his footsteps. I am very much a hands-on learner and it struck me that I can learn and have a wage at the same time with an Apprenticeship. My Dad and his Dad are both past Apprentices, so I would like to continue that legacy and follow in their footsteps.

Before starting my Apprenticeship, I was in school studying so that I could pursue a life in the job I have always wanted to do which is Engineering. I came out with 6 GCSE's in Maths, English, Science and other subjects.

I have learnt so much already in work and at Alliance Learning, which I've been able to apply into industry such as wiring and testing, which has taught me to wire in a fan motor on an air compressor. I've also expanded my knowledge on the following areas: Health & Safety, maintenance skills on machines and wiring diagrams.

AFS Limited sell, maintain and install air compressors. AFS is a relatively new company, founded in 1999 by Mr Andy Ryan. AFS do have a small workforce for how big some of the jobs are, with 7 office staff and 5 engineers.

So far, my experiences of Alliance Learning are good. I am enjoying the Apprenticeship and it has really lived up to my expectations. I would definitely recommend Alliance Learning to other people looking to undertake an Apprenticeship.
