

Apprentice Case Study

MANPREET KAUR SHOKER
MECHANICAL ENGINEERING APPRENTICE
AT MBDA UK LTD

“ My Apprenticeship has opened up doors that would not have been possible if I went to University! 🙌 ”

I decided to do an Apprenticeship purely due to the benefits it brought me. I was always a hands-on learner, however I understood the importance of qualifications. An Apprenticeship gave me that mix! Being able to implement what I have learned in the classroom in real-life working scenarios is very rewarding.

My Apprenticeship has benefitted me in two ways – professionally and personally. I have gained so much knowledge from engineers I work with who have been in the profession for years. Understanding how they got to where they are now is also inspirational to me. Being put into situations has also helped build the person I am today and the way I handle situations. MBDA has also supported me throughout by offering me training courses and workshops. My Apprenticeship has opened many doors to opportunities that would not have been possible if I went to University.

I am currently employed by MBDA; a missiles and missile systems world-leader. We offer a comprehensive product range that incorporates today’s most advanced technologies. Currently, I rotate around the company in placements and get involved in a variety of projects to gain an understanding of how MBDA operates. This means I have experienced a lot since I started my Apprenticeship.

When I finish my Apprenticeship, I want to go into either Support Services or Field Support within MBDA. It is an amazing company to work for and has a great working environment and career opportunities.

Alliance Learning has done nothing but support me and prepare me for the real working life. Whilst completing my qualification, my tutor, John Crook, has been an amazing moderator and has aided me to achieve amazing results. I was constantly updated through difficult times like COVID and was never worried or stressed when in the hands of Alliance Learning.
